

# Prontor electronic shutters.

## Million- cycle reliability.

To the engineer who needs totally reliable exposure control, Prontor Magnetic E electronic industrial and scientific shutters are a thing of beauty. With their ultra-reliable solenoids attached, and with sizes from 23mm to 150mm, they can control light in everything from small scientific devices to large telescopes. Opening concentrically from the optical axis, they virtually eliminate vignetting. And, because these maintenance-free shutters achieve over a million cycles in rigorous tests, under normal loads many more than a million cycles can be achieved.
